Release Notes

Version 2.0.9 – May 3, 2005

Enhancements in this Release

o   There were no enhancements in this release.

Issues Resolved in this Release

o   Corrected an error that occurred where system did not allow the user to complete the Reguest to Register iEdison organization process after completing the form.

o   Added an error message if the user attempts to insert or modify and invention record after entering a "Title Elect Date when the Status is Under Evaluation".

o   Corrected an error that occurred when searching for an Invention with a Invention Status of "Note Elect Title-Waive to Government", "Waive to Third Party" or "Waive to Inventors" and no items were returned.

o   Three additional agencies (USDA/FS, USDA/ARS, USDA/CREES) are now on the list for which the Licensed Biological Material status can be set for the invention report. The error message the user receives if he or she incorrectly tries to apply this status (on the invention report form) will display.

o   Corrected an error that occurred when an iEdison Administrator generated a list of results from the Search for Registration Requests query. Also corrected were several sort criteria dropdown lists that did not previously contain the full set of search criteria.

o   Corrected an error that occurred when an NIH iEdison Accounts Administrator or an OTT Adminstrator searched for existing Invention Reports and the Grant Number would not display.

o   Corrected an error that occurred when a user tried to search a Utilization report with the Fiscal Year 2006 and the Fiscal Month of February. The search would successfully upload through Officer, but iEdison extramural web returned an error message indicating that the Fiscal Year was invalid.
